Application Settings

Instead of "site.ru", write down the server address or the IP address of the virtual machine where the parser is installed.

1.   Go to the "Settings" page (address in the browser: http://site.ru/settings). If you are running the application on the local node.js server, then your address will be:

http://localhost:3000/settings

2. The menu item "Language" allows you to specify the language of the application interface, all sections will be affected. Available languages: Russian, English, Hebrew, Ukrainian, Belarusian.

3. When using Hebrew as the main application language, the interface elements will be located on the right, due to the peculiarities of this language.

4. The menu item "Theme" allows you to set the background color of the web application. Available themes: white (by default), black (provides more comfortable image for the eyes to display information on the screen in low light).

5. Click the "Apply" button to save the settings. If the settings have been changed successfully, a message will appear. After changing the settings, you will need to restart the application.
